

What's Under the Hood?

Best-of-Breed
color management
and print
management:

Hewlett Packard Z6100

The HP 6100 printer is the fastest high-resolution multi-head printer available today. Using highly stable pigment-based, environmentally-safe inks, the **2400 dpi** printing creates a perceived resolution of 4000 dpi and gorgeous continuous tone images. No other production printer creates better-looking photographs, not even *Lambda*. Combined with our plant-wide **Practix Color Management** and **Onyx RIP Control** system, our PMS accuracy on multiple materials can't be beat!

Get to know
our in-house
printers:

Epson 9800 Pigment Inkjet

With the ability to print at **2880 dpi**, this is not just any printer! Using archival pigment based inks, the Epson 9800 is the highest resolution, longest lasting, largest tonal scale inkjet printer available. Perfect for fine art, museum-grade photographs and difficult color matching, the PMS accuracy of this printer is around 98% - best of breed!

Environmentally-
sensitive,
Non-VOC
production:

Eco-Solvent Digital Screen Printer (3)

Employing the latest European technology, the Eco-Sol sprays environmentally-safe, **Non-VOC** solvent ink onto a variety of print materials. Ink etches into the material and is fixed with heat, creating a weather and fade resistant graphic. This printer is perfect for outdoor, large-size, and high-volume graphics. With a maximum resolution of **1440 dpi**, even inexpensive, short-term graphics look fantastic!

Direct printing
saves money
and waste:

Arizona GT250 Flat Board Printer

Another environmentally-sensitive printer, GT250 employs UV light to permanently fix printing ink to many rigid board materials up to 2.0" thick! Image resolution is higher than any other direct printer in the class, with no banding in solid color or blended areas. The printer allows for double-side registered printing and direct-to-cutter work - perfect for inexpensive POP signage.

Rich, permanent
colors on 9
different fabrics:

Mimaki Dye-sublimated Fabric Printer and transfer line

This 720dpi machine prints rich, saturated fabric graphics for indoor or outdoor use. In house, we stitch, grommet and hem these fabrics into huge banners for tradeshow, museum, POP and merchandising. Combined with tension aluminum forms, our clients create dramatic 3-dimensional spaces for temporary or permanent environments!
